

Financial Asset Management

IDENTIFY FINANCIAL SAVINGS OPPORTUNITIES AND
REDUCE INEFFICIENCY IN YOUR PROCESS SEGMENTS

Renewed Financial Focus

Financial Auditors and Consultants have been experiencing a drastic change in the way their customers view Governance and Compliance requirements and reporting. Enterprises and Governments are placing a renewed focus on Accountability, Cost Management and IT Governance. Auditors are now being asked to perform in depth financial audits on cost accounting, budgets, and contract compliance as well as the traditional financial accounting requirements.

Professional Auditors and Financial Analysts are finding it increasingly difficult to capture, analyze and review the voluminous amounts of data required to provide meaningful decision support information to their clients and their internal organizations. With these new requirements,

Auditors are finding that they require additional skills and completely new tools to maintain their competitive edge and to demonstrate the true impact of their solutions to their customer's bottom line.

In particular, the Sarbanes-Oxley Act has created an extreme workload for Financial Auditors but has not provided any tools to assist in the process. Although Sarbanes-Oxley does not mandate technology or software-based controls, these controls may ease the

compliance process by delivering a cost-benefit result that is superior to manual solutions.

Auditors will not only be looking for process consistency, but also for the consistent application of controls over those processes. For this reason, auditors are finding that automated compliance technologies are far more effective in establishing and validating audit trails during the audit process.

In most cases, software solutions are the best way to automate controls and enable the required consistency.

Scenario Systems provides a comprehensive solution to these challenges by enabling Audit and Consulting Professionals to significantly increase their productivity and accuracy in conducting Financial and Infrastructure Audits. It permits the Audit and Consulting Professional to quickly and easily audit, validate, and report on compliance obligations using cost-effective and innovative automated software solutions, thereby producing accurate and rapid results in a non-disruptive manner.

InfraVision Financial Asset Manager

The InfraVision Financial Asset Manager has been specifically designed to enable Audit Professionals to perform detailed

We help companies to :

**Simplify asset data
reconciliation**

**Project the financial and
architectural behaviors of
the most complex
infrastructures**

**Improve historical
reporting**

**Implement best practices
for improving control**

**Fully simulate any
operational infrastructure
and model it financially
and architecturally**

**Model growth and
change scenarios for
any infrastructure, thereby
enhancing investment
justification through
the generation of key
metrics such as
ROI, NPV, IRR and TCO**

Financial Analyses in support of Financial Audits, Budget and Contract Analyses, IT and General Asset Infrastructure Audits, and TCO Assessments.

Integrated Applications for Professionals

The Infravision Financial Asset Manager is one of four powerful Infravision integrated applications available for Audit Professionals. It is a powerful Windows®-based application that fully automates the processes needed to capture, analyze, review, track and model financial compliance with emphasis on Sarbanes-Oxley. It is useful for Information Systems Audits, Contract Compliance Audits, Budget Management Audits, and Financial Governance Audits.

The Infravision Financial Asset Manager recognizes the architectural value of Servers, Storage Devices, PCs, IP Phones and Workstations, Networks, and Software Licenses. It is therefore extremely useful in Technology Audits as well as Financial Audits.

It is a scalable, multi-user Client/Server application that supports a single user or hundreds of concurrent users for large projects. It can be deployed on a single workstation, clusters of powerful Windows® or UNIX servers, or even on Oracle®-based Mainframes.

It is easy to use and fully supports Governance Compliance, Cost

Management, and Management Reporting.

Benefits of the Infravision Financial Asset Manager

The Infravision Financial Asset Manager delivers benefits to Audit Professionals by facilitating significant increases in productivity and accuracy in all phases of the Audit process. It provides rapid yet in depth and detailed analyses of complex financial and procedural issues, thus delivering lower-cost solutions to clients and internal management. The result is improved compliance to Sarbanes-Oxley, ITIL, and other key Governance guidelines at a drastically reduced audit-preparation cost.

Features of the Infravision Financial Asset Manager

- Dynamic Chart of Accounts for Cost Allocation and Analysis;
- General Data Importer (from other applications, spreadsheets and databases);
- Financial Modeling, Control & Reporting (with full foreign currency capability) incl. Leasing;
- Simulation of complete IT Projects including: Systems Consolidation, Network Consolidation and Convergence, Outsourcing, In-sourcing and System Replacements
